CLAPTER AREAST I

Cuben citizen. Refugee who left Cube in January 1961.

He was employed by Consolidated Railroads of Cuba for about 20 years.

The source of this information is normally available for further interrogation, should this report generate additional requirements.

- 1. Iam 46 years old and I started working in November 1940 as an office clerk in the Havana office of the Guantanamo Western Rail and Company. In 1953 I was elected Vice President of the Consolidated Railways of Cuba, the Cuba Railroad and the Cuba Northern Railroad. In February 1954 I was elected President of the Guantanamo Western and Vice President of the Cuba Railroad and the Cuban Northern Railroad. In June 1958 I was elected President of the Consolidated Railroads of Cuba and I held this position until October 1960 when the railroads were confiscated by the Cuban Government by Law Decree No. 890. I finally left Cuba on 4 Jan 61.
  - 2. Q. Can you tell me what was the length of the mein lines operated by common carriers in Cube and what was the total length of all branch lines combined?
- Cube, which ran from Senta Clara to Camaguay to Santiago de Cuba to Quantanemo. I would say that the main line and the branches combined would be 1400 plus miles.
  - 3. Q. What weight of rell is most common on mainlines? What is the approximate age of most main-line rell and are the plates commonly used?
    - A. I would say the most commonly used rall is 80 lbs per yard. About 25 per cent of the main line has 125 lbs per yard. Sidings generally use 60 lbs per yard. The approximate age of most of the main line rall is vis to 20 years. The plates are commonly used.

1

- 6. O. How many ties exist per kilometer of main line? What type of ties are used? Are ties treated; if so, in what manner? What is the average life of ties in main-line service? San you give an estimate of the average age of ties now in the main lime?
  - A. To the best of my recollection, there are close to three thousand ties per kilometer of main line. The ties are of hard wood but they are not treated. The average life of the ties is about 15 years and I would say that the average age of the ties now on the main line is about 15 years.
- 5.0.Locate and indicate size of principal freight classification yards and other freight yards.
  - A. Our main classification yards were at Santa Clara, Camaguey, Moron, Santiago de Cuba, and Guentanamo.
- 6. Q. Locate and describe the principal repair shops for steam and for diesel locomotives.
  - A. We had complete repair shops for both steam and diesel locomotives in the eastern outskirts of Camaguey City. As a matter of fact, these shops are shown on the map of Camaguey City which appears on the road map of Cube published by Esso Standard Oll, S A, in 1956.
- 7. Q. Locate and describe the principal repair shops for freight and passenger cars.
  - A. The same shops in Camaguey City were used for the repair of freight and passenger cars. The Consolidated Railways of Cuba did all of their own repairs and in addition they did work for various sugar mills in the area.
- B. Q. is any part of the system electrified?
  - A. No.

CONTRACTOR OF

到355...

- 9. Q. Is there a division between lines operated by diesel and steam motive power?
  - A. No. The Consolidated Railways of Cuba had 84 diesels and six steam engines.
    The six steam engines were used more or less for emergency work.

から、 Manager Control (1) からまでいる機能があります。 Control (1) Angle (1

- 10. Q. What is the number and total length of tunnels?
  - A. There are no tunnels on the system.
  - 11. Q. State the number of locomotives in each major category, of diesel, steam and electric; and, insofar as possible, break the totals down by horsepower, age and country of origin.
    - A. As I have stated, we had 84 diesel engines and six steam engines. I do not remember the details about these but I know that some of the diesels were \_1600 horsepower, some 900 hand some 600 to 650 horsepower /see 00-K-3,993,8017.
- 12. Q. Please give the number of passanger care and the number of frieght care.
  - A. I'm afraid that I cannot give you accurate figures. I know that we had ever two thousand fraight care but I do not remember the exact number nor do I remember the number of passenger cars. (See 00-K-3,903,801. The "on file" material contains this information.
  - 13. Q. Ware any passenger or freight cars equipped with roller bearings?
  - A. Yes, some, but I do not remember how many.
  - 14. Q. Are diesel locamotives operated in multiple?

Contraction of the Contraction of the Landing Contraction of the State of the State

A. Yes, but not always. It depends on the weight of the train and the

SafaCallata

- Q. Does each freight train carry a caboose on its rear end?
  - Yes
- Q. What is the average and maximum speed of passenger trains between stops?
  - Haximum speed was 50 miles per hour and average of not more than 30 miles per hour.
- 17. Q. Can you give the number of employees of the common carrier reliroads? is there a seasonal variation in employment?
  - I can only speak for the Consolidated Railways of Cuba which had over 10 thousand employees. There was a seasonal variation but it was very slight.
- Can you describe the main freight haulage pattern of the railway system of Cuba? Indicate major commodities and direction of movement.
  - A. I can speak only for the Consolidated Railways of Cuba. The main traffic was on the Cuba Railroad and the Western Railroad of Cuba. The heaviest traffic was from Camaguey to Nuevitas. The Consolidated Railways of Cuba handled one third of the Cuban sugar crop, so that most of the traffic was from the sugar mills to the coast. However, the railway also handled cattle, rice, vegetables and oil and other commodities.
- Q. What is the average length of haul? (This was stated in a 1952 report as 36.8 kilometers.)
  - A. I would say that in 1960 it was about the same as in 1952.
- 20. Q. What are the principal routes of passenger movement? How dense are such movements?
  - A. I would say to and from Havana. I would estimate that in this traffic the railroads carried about six thousand passengers per day.

116

- Q. Is daily commutation a significant factor in the movement of passengers.
  - It is not a significant factor.
- Q. Is less-then particed movement of relative importance in the total movement of Cubin freight?
  - A. I would say that It is not very important.
- Q. With respect to imports and exports, what ports are used for greatest Interchange of tonnage between the relironds and ocean shipping? To what extent are these semports or any others used for interchange with coastwise, shipping?
  - A. Speaking for the Consolidated Railways of Cubs, I would say Nuavitas, Tarefa, Pestellilo, Suntiego de Cube, Boqueron, Antilla, Sunta Cruz del Sur, and Casildo. I would say that any interchange with coestwise shipping is insignificant.
- Q. In what condition are the principal highways of Cubat
  - There is only one main highway on the island which runs practically the antire length of the Island from Piner del Rio to Havens to Santiago de Cuba. This highway was in poor condition when I laft Cube in 1961.

19 19 新門野餐地上車車鐵品品的一年一回了中門

- A. Sugar, wood and general commodities.
  - The second of the second

faire in the top to 1-1-C-R-E-T

- What is the general pattern and direction of flow of this traffic?
- 27. Q. What considerations determine the selection of the means of transport for the major commodities moved?
  - A. Price, time, nature of commodity, and facilities.
- Q. What pipelines, if any, are located in Cuba?
  - A. Hone to my knowledge.

THIS IS UNEVALUATED INFORMATION

SOURCE: Cuben citizen.

> Former executive of Consolidated Railroads of Cube who fled from Cube in 1961.

The source of this information is normally available for further interregetion, should this report generate additional requirements.

An file in CIA Library is a copy of "Consolidated Statements of Rolling Stock," years ending 30 Jun 59 and 58, published by the Consolidated Railroads of Cuba, and a copy (in Spanish) of a statement of the condition of the rolling stock of all Cuban railroads, published by the Cuban Ministry of Transport and dated Havana, 2 Jul 63, both of which documents are referred to in the following report - UNCLASSIFIED.7

- 1. From time to time I have received information from some of my former employees who are still employed by the Consolidated Railroads of Cube (which was taken over by Castro) giving me information as to the condition of the reliroses.
- 2. The information which I have received from time to time is to the effect that because of poor maintenance, lack of spare parts and general inefficiency, the railroads in Cube ere all but inoperative.
- 3. I am told that this year 19647, for the first time since Castro has been holding his big meetings in Havene on May Day, he did not transport people from the country to Havene by refleced. I judge from this that the rell-roads were incapable of transporting large numbers of people as they had in the pest.
- 4. I have received from Cube a statement concerning the condition of the rolling stock of all rellroads in Cube for the fiscal year June 1962 - June 1963.
- So A comperison with the statement of rolling stock of the Consolidated Reliroeds of Cube only for the years ending 30 Jun 58 and 59 (which is the last statement prepared by the company before Castro seized the relirods) will show the deplorable condition of the rolling stock.
